

# **Patient Evidence Report** **Via Vitae Oral Care System**

**Supportive Approach to Mucosal  
Health in Dental Practice**

# Scientific Profile: Gynura Procumbens

## Trifecta of Support

### Antioxidant Activity

Protects cellular integrity from oxidative stress.

### Advanced Botanical Support

### Tissue Regeneration Support

Assists the natural recovery dynamics of the oral mucosa.

### Soothing Properties

Calms irritated tissues and reduces visible mucosal stress.

# The Via Vitae Toolkit

## System Synergy Matrix

<b>Dentatin</b>	<b>Proseptum</b>
Water-based extract (Mouthwash)	Tincture
Global / Full Mouth	Targeted / Localized
Daily hygienic care assistance, supports overall oral hygiene balance.	Concentrated soothing application for areas experiencing specific mucosal stress.

# Case 1: Gingival Support

Presentation

24 Hours After Support

## Context

Presentation of discomfort and severe gingival stress.

## Protocol

Deep professional cleaning followed by targeted Proseptum application and daily Dentatin rinsing.

## Observation

Immediate cessation of active bleeding through hygiene intervention. Visually calmer, balanced tissue observed by Day 1.

## Case 2: Post-Extraction Support

Day 6 post-extraction

### Context

Multiple extractions requiring proactive recovery support.

### Protocol

Immediate local application of Proseptum + Dentatin for daily hygiene maintenance.

### Observation

Fast, natural tissue recovery. Stable oral environment maintained with minimal visible signs of post-procedural irritation.

# Case 3: Implantation Support

Pin Installation

After 8 Days

## Context

Hardware pin installation requiring enhanced mucosal assistance.

## Protocol

Proseptum applied locally +  
Dentatin utilized daily for 8 days.

## Observation

Clean surgical site maintained.  
Exceptional tissue integrity and hygiene observed naturally supporting the hardware integration.

# Case 4: Gingivectomy Recovery

After Surgery

4 Days Post-Surgery

## Context

High-level post-surgical mucosal stress across the gum line.

## Protocol

Proseptum applied strictly to affected areas, supported by daily Dentatin usage.

## Observation

Rapid return to visual normalcy. The natural tissue regeneration process is effectively assisted by Day 4, with a remarkably clean appearance.

# Case 5: Leukoplakia

Initial Presentation

Week 3

Week 5

## Context

Sensitive, traumatic localized areas on the tongue causing discomfort.

## Protocol

Consistent hygienic care using Dentatin applied 3 to 4 times daily.

## Observation

Gradual, consistent soothing effect. Restoration of mucosal balance and comfort observed over the 5-week application period.

# Case 6: Support for Irritated Mucosa

**Compromised Environment**

## Context

Widespread mucosal irritation and significantly compromised oral hygiene.

**Restored Balance**

## Observation

Dramatic visual improvement. The system effectively maintains oral hygiene balance, soothing the irritated mucosa and supporting the return to a natural, comfortable state.

# The Via Vitae Advantage: Practice Integration

## Daily Hygiene Support

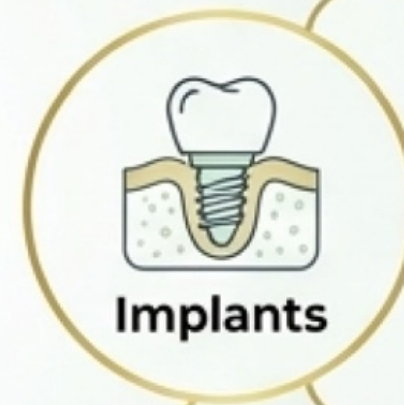

Safe, natural, daily oral balance for all patients.

Daily Hygiene

Surgery

Implants

Sensitivities

## Post-Procedural Comfort

Non-invasive hygienic care assistance following surgery or extractions.

## Tissue Vitality

Consistently supports the natural recovery dynamics of the mucosa across all clinical scenarios.
